(a) Price change by scenario
No time-of-use tariff
Peak–valley spread doubled
Surcharge of 20%, 18:00–22:00
Mean change in log price (×100)
Hour of day
(b) Predicted response
Change in predicted charging (%)
bands: 90% interval,
uncertainty of the elasticity
Hour of day
(c) Dependence on the elasticity
No time-of-use tariff
Spread doubled
Evening surcharge
Elasticity
−0.21, causal estimate
−0.45
−0.76
−1.58, pooled regression
Change in charging where the price rises (%)
